Water-cooled Slide-Gates

Water-cooled slide gates as intermediate-flange-type in welded construction made of temperature-resistant steels, heat-resistant steels or Ni-based alloys, designed for tube diameters **DN 100 - DN 500** with the purpose of **shutting off hot bulk materials up to 1000 ° C** by variable flange sizes also usable in lined pipings.

Flange sizes:

preferably PN 10 ; PN 6, if required, or customized

Actuation:

pneumatically actuated (standard), but also manually or electrical actuation unit

Sealing:

by 5 mm thick **ceramic-based gaskets** for flanges, by **stuffing box packing** with inlet for locking medium (sealing of actuation bar)

Wear protection:

by **surface coating, lining** for corresponding surfaces; also installation of **metallic or ceramic, heat- and wear-resistant bushes** possible in special cases
